

## XO® MPLS IP-VPN

XO MANAGED SERVICES

For multi-location businesses that require secure T-1 or higher services, XO Communications offers flexible, intelligent, managed network solutions that provide more bandwidth for the dollar, faster application deployment, and lower network operating costs than traditional Wide Area Networking services.

### Overview

With XO IP-VPN, you get a network-based, fully-managed, Wide-Area-Networking solution that makes it easier to stay on top of your network budget and the technology curve. Because the intelligence of the XO IP-VPN resides in our network, there's no need to purchase expensive equipment, update and maintain it. You get the cost savings of consolidating your voice, data, and video networks onto a single IP-based platform. And XO helps you design, install and manage your IP-VPN, and customize it to meet the specific Class of Service and bandwidth requirements of your multi-location business.

### Custom-designed Solution

Multi-location businesses that require T-1 or higher services need Wide Area Networking solutions that are flexible, cost effective, and provide secure networks for sharing files and data between locations. With XO IP-VPN, you get all of that and more. Whether you require a fully managed solution, want XO to help you co-manage your network, or simply want assistance with network monitoring and fault notification services, XO can customize a VPN solution to meet the specific requirements of your business.

### Competitive Performance

XO offers competitive Service Level Agreements (SLAs) on packet loss and jitter. You get 100% availability. 99.8% Packet Delivery. And Latency rates of 65 milliseconds. Our SLAs offer fault resolution within four hours. And with on-net speeds of up to 100 Mbps, you can easily use complex, data intensive applications across our IP-VPNs.

### Powered by MPLS Technology

With XO IP-VPN, you get all the advantages of the latest Multi Protocol Label Switching (MPLS) technology, including speedier deployment of critical business applications, like Voice over Internet Protocol (VoIP), supply chain management and other sophisticated back-end applications. In short, you get the best of both worlds – the security and Quality of Service of ATM and Frame, and the scalability and flexibility of IP networks. Unlike ATM and frame relay, our MPLS-enabled IP-VPN solution offers universal site-to-network connectivity, a broader selection of access options, including everything from T-1s to type 2 Ethernet, and no rigid limits on bandwidth.

### Maximize Your Network Investment

Our IP-VPN solutions make it easier to maximize your network investment than traditional Wide Area Networking services. That's because IP-VPNs use bandwidth far more efficiently than traditional wide area networking services. And they're more compatible with IP applications than ATM and Frame.

### Why XO

XO is the proven provider of telecommunications services for business. In fact, serving business is our only business, and we've been doing it for more than 10 years. We offer a broad portfolio of voice, data, converged and managed services. We handle more than 16 billion minutes of VoIP traffic per year, and coast-to-coast voice and data services on a secure, private IP network that includes more than 3,000 fiber-fed buildings, metro fiber rings, a national OC-192 fiber backbone, and hundreds of local central office collocations.
